The iPhone 3GS was first introduced with 16GB and 32GB of flash memory. The display panel and front glass are relatively easy to repair, but getting to the battery or rear panel can take some time and effort. This is due to the design of the 3GS. It is built from the back to the front, so the further back a component is think rear case, the harder it is to replace. One major plus with the 3GS is the ability to replace the front glass by itself as opposed to other iPhone models that require replacing the entire display assembly when your screen breaks. Vincent and The Grenadines Trinidad and Tobago Turks and Caicos Uganda Jordan Venezuela Lebanon Sales peaked over its predecessor with more than a million sales in the first twentyfour hours of order availability and more than four million sales in the first four days of retail availability. Retaining most of the external design of the iPhone 4, the 4S hosted major internal upgrades, including an upgrade to the Apple A5 chipset, and an 8megapixel camera with 1080p video recording. It debuted with iOS 5, the fifth major version of iOS, Apples mobile operating system, that introduced features including iCloud, iMessage, Notification Center, Reminders, and Twitter integration. The 4S was officially discontinued on September 9, 2014 following the announcement of the iPhone 6, although production did continue for developing markets until February 17, 2016.

During the course of its lifetime, the iPhone 4S was one of the bestselling iPhones ever produced and it is the first iPhone to support five major versions of iOS iOS 5, iOS 6, iOS 7, iOS 8, and iOS 9 the iPad 2 was supported from iOS 4 to iOS 9 . The 4S is also the last iPhone to have the original 30 pin connector as the succeeding iPhone 5 replaced it with the all digital Lightning Connector. Vincent and The Grenadines Trinidad and Tobago Turks and Caicos Uganda Venezuela It is the first iPhone that does not need to connect to iTunes in order to be activated because iOS 5 introduces features like iCloud. Interface control elements consist of sliders, switches, and buttons. The service allows users to browse and download applications from the iTunes Store that were developed with Xcode and the iOS SDK and were published through Apple. Users can rotate their device horizontally to landscape mode to access Cover Flow. Like on iTunes, this feature shows the different album covers in a scrollthrough photo library. Scrolling is achieved by swiping a finger across the screen. Alternatively, headset controls can be used to pause, play, skip, and repeat tracks. The commands given do not have to be specific and can be used with natural language. Siri can be accessed by holding down the home button for a short amount of time compared to using the regular function. This supports the inclusion of media in text messages, integration with the devices voicecontrolled software assistant, and read receipts for sent messages. Input to the computer comes from a keyboard displayed on the multitouch screen or by voicetotext by speaking into the microphone. Different features have different language requirements, such as keyboards compared to the word predictor and spellchecker, which needs a large dictionary of words. Language support is related to the iOS 5 operating system that the device launched with, although not always.

The iPhone 4S can also run iOS 8, which was released on September 17, 2014. Given that the device was supported for more than 3 years, some newer features of the software such as Apple Pay were not supported. It is also unable to work with Apple Watch due to the relatively aged hardware. In fact, some users often reported that performance on the 4S is very slow, similar to how iOS 7 ran on the iPhone 4, and suggesting that they should not upgrade due to battery draining issues and hanging up on calls. Meanwhile, Apple released iOS 8.1.1, which brought slight improvements to the

phone and the iPad 2, but it still did not run as fast as newer models. This makes it the first iPhone to support 5 major versions of iOS, and the second iOS device to support 5 major versions iOS 9 will support the iPad 2 as well, bringing its total up to six major versions of iOS supported. On December 22, 2015, Apple faced a class action lawsuit for crippling the iPhone 4S with the iOS 9 update with slow and buggy software or to pay hundreds of dollars on a new iPhone. The option to downgrade to iOS 6.1.3 also allowed an over-the-air update to iOS 8.4.1 due to technical limitations preventing a direct update from iOS 6 to iOS 9. The release of iOS 9.3.6 for the iPhone 4S makes it the longest supported iPhone to date, at nine years of support. This is included on the black model as well but is less visible. Notice the repositioning of the antennas which forms the perimeter around the phone; the iPhone 4 antenna is on the top of the phone while on the iPhone 4S, the antennas are on the sides. This side antenna placement meant a benefit of cellular signal attenuation and was used in later models like the iPhone 5. Apple redesigned the antenna in the iPhone 4 CDMA after some original iPhone 4 users reported cellular signal attenuation problems as a result of holding the phone in certain positions.

The 4 generation iPhones differ from earlier Apple designs; the bulges of the back panel as well as the band between the front and back are gone and have been replaced with flattened surfaces. The redesign reflects the utilitarianism and uniformity of existing Apple products, such as the iPad and the iMac. The glass rear covers on the iPhone 4S along with the iPhone 4 were notorious for cracking easily after an accidental fall. A similar design glass body with stainless steel frame was later reused with the introduction of the iPhone X and iPhone 8, although this second iteration of the glass back design was for wireless charging. This error may be due to a malfunctioning switch sensing the headphone plug and different handling of this information by different apps. Previous iPhone models were released during or after declining sales figures. In addition, iPhone 4 users had high marks for being satisfied with their phones. Upon the announcement of the iPhone 4S, shares of Samsung Electronics, HTC and Nokia gained on Wednesday after the 4S was announced, while Apple stock fell. However, later in the day, Apple shares rebounded ending with a 1% gain. Retrieved September 28, 2014. Retrieved October 10, 2011. Retrieved May 17, 2012. October 7, 2011. Retrieved May 4, 2012.
