Login to post To restore the shaver to its previous charging capabilities, you will need to replace the batteries. You will find correct battery type at shaveroutlet.com. See link below. You will need to order two Scroll down item page for helpful video concerning installation Then remove the swivel frame by removing the two tiny screws on each side of the inside of the swivel frame. To open the shaver you will first need to remove the two round screw covers on the bottom. Then remove screws. You can then gently pry the two halves apart from the bottom See link below for manual Cutter wasnt pressing against the foil properly due to a bit of wear on the spring clip holding the cutter

pin. <http://pilot-market.ru/new/files/crafting-and-executing-strategy-18th-edition-solution-manual.xml>

Fixed with about 1cm of cigarette paper moistened and rolled into a 12mm ball. Stuffed that into cutter pin hole and rammed home with the cutter pin. Take the foil off and wiggle the cutter if its feels loose, this might help, though the battery might just be getting old. Where can we get them and cost. Live in Gauteng, South Africa Braun suggests that you change these every 1218 months for best performance. You will find replacements at shaveroutlet.com for your model 4501 Braun shaver. See link below. It is also possible that your shaver is running too slowly due to an old battery if youve never replaced it. If you require a new battery, it can also be ordered from shaveroutlet.com. See link below. To change the battery you will need to be able to do a little soldering. Open the shaver by removing the two round screw covers on the bottom of the shaver and then the screws underneath. You will also need to remove the foil and cutters and then the swivel frame which is attached by two tiny screws. Once removed, you will be able to open the shaver from the bottom and seperate the front and back. Remove the circuit board to easily get to the battery. Note The tabs on this type battery will work for most applications however they may be slightly different than some original equipment. For these instances, it is sometimes suggested that you use a modified installation technique. This is to break the tabs off of the old batteries rather than removing them from the circuit board. This allows the old batteries to be removed but leaves the tabs attached to the circuit board. You can then solder the tabs from the new batteries to the old existing tabs. On the bottom of the shaver is the charging port. That black plastic piece surrounding it can be pried off. Once removed, the side pieces easily remove. Youll now see screws holding the body together. Have at it.

At the bottom of the razor are two plastic caps on either side of the charging port, youll need to pry them out with a sharp pick or thin knife tip. Once removed, you can get to the screws that hold the front and rear case halves onto the main shaver chassis where the PCB with the rechargeable battery is soldered onto the board. Unsolder the battery and solder in the new replacement battery and put the case back together, making sure all the parts are in the correct position, and youre ready to recharge the shaver and start shaving again. To find your replacement parts or batteries, try Electric Shaver Service. They also do repairs, so you might want to get an estimate if you dont want to do the repair yourself, etc. Theyre reliable and fast in getting shavers repaired and back to you quickly. 18884761785 Heres a link to the page with your battery on it and the toll free number to call for estimates too. www.electricshiver.com Hope you find this Very Helpful and best regards! Azur Advanced Azur Elite Azur Performer Plus Azur Pro Other steam irons Which steam iron do I have. FAQs Contact Us You can find the product name on the side of your steam iron It is very easy to find the name if your steam iron. Just look at the right or left side of your steam iron. The name of your product is written there such as Azur Elite, Azur Advanced etc. Why descale a steam iron. Over time, steam irons can build up scale. The harder the water in your area, the faster scale impurities develop and solidify. Regular descaling prevents problems such as brown stains on your clothes, brown water, and leaking. Cleaning your steam iron regularly keeps steam output at its highest and extends the lifetime of your iron. How to clean your steam iron Self Clean function All Philips steam irons Fill the water tank and turn on.

<https://www.mistressayn.com/images/7vmm2-manual.pdf>

If your iron has adjustable settings, choose MAX TEMP and NO STEAM. When the light goes out, unplug and hold the iron over the sink so the soleplate is horizontal. Activate CALC CLEAN using the button or selector. Varies per model. Press and hold, if necessary. Shake the iron gently back and forth until empty. Water, steam and scale will come out of the steam vents. Heat the iron and glide over a cloth to clean the soleplate. Repeat process, if necessary. Repeat this whole process once a month, or more if necessary. Lie the iron flat and push up the Quick Calc Release lock at the back of your iron. Remove the scale container. Empty, rinse and dry it. Wipe away any scale or residue around the opening on the iron. Reinsert the container and lock in place. Repeat this process once a month, or as necessary. Hold the appliance in vertical position over the sink. Flip up the lever of Quick Calc Release collector, and pull it out Clean the Quick Calc Release collector with water Gently shake the appliance to allow scale particles to fall out Insert the Quick Calc Release collector

back into the appliance and push down the lever “click” to lock the collector. Repeat this process once a month, or as necessary. Activate CALC CLEAN using the button or selector. Varies per model. Press and hold, if necessary. Shake the iron gently back and forth until empty. Water, steam and scale will come out of the steam vents. Heat the iron and glide over a cloth to clean the soleplate. Repeat process, if necessary. Repeat this process once a month, or as necessary. Buy filter Frequently Asked Questions about Philips Steam Irons Should I use demineralized or ironing water to prevent limescale in my steam iron. We recommend using tap or demineralized water for all Philips steam irons. Demineralized water is the best option to prevent limescale build up in your iron. Please never use ironing or perfumed water in your Philips steam iron.

Using these contaminates the steam iron and can damage it. How often should I descale my iron for best steaming results over time. We recommend descaling your iron every 12 months. By cleaning your iron regularly, all calc particles will be removed and your iron will work better, and last longer. Do I need to descale my steam iron even though I always use demineralized water. If you always use demineralized water, there will be significantly less limescale build up in your iron. However, in some irons the descaling light will blink based on the time that the appliance has been used. In this case, please complete the descaling routine in order to use the iron again. Do I need to descale my steam iron even though I’m always emptying my Quick Calc Release. Yes, we recommend descaling your Philips iron every 12 months. The Quick Calc release collects many loose calc particles, but not all. By descaling your iron regularly, all calc particles will be removed and your iron will work better, and last longer. I’m not sure what iron model I have and which descaling routine should I use You can always find the correct instructions in the user manual, if you still have it. If you do not have the user manual anymore, please try to find your appliance model number on your steamer it should look like GCXXXX . Knowing this number, you can find all the product information on the Philips website. I can easily unsubscribe at any time. What does this mean. Subscribe Philips values and respects your privacy. Battery typeCant find any screws or obvious clips that keep it in one piece. What type of batteries are these. Sources Thanks,Cant find any screws or

obvious clips that keep it in one piece. What type of batteries are these. Sources [Click to expand](#). Carefully pry them out and there will likely be a phillips head screw there. The batteries are normally NiMh. The Brauns Ive replaced the batteries in has had one or two AA cells. Carefully pry them out and there will likely be a phillips head screw there.

The batteries are normally NiMh. The Brauns Ive replaced the batteries in has had one or two AA cells. [Click to expand](#). My somewhat elderly although working Braun shaver does not hold a charge for very long nowadays. I presume this is because the battery is failing I had a look and its a HRAA BKH. Any ideas Are the batteries still available. I presume if the charging circuit is knackered there isnt much point any more. Regards Roy [Click to expand](#). They are basically ordinary AA NiMh cells with solder tabs. Open the shaver up and show the battery to the sales droid. Really old shavers used NiCa cells. NiCa has been banned in new stuff for years in Europe, so unless the shaver is very old, it is likely using NiMh. Some models used to have the cell type printed on the shell. My 5 705 does not, but Im almost sure it uses a single 1.4V AA cell, possibly a AAA cell. Cheers, Thomas It appears to have some similarities to my 4501 it appears to use one NiMH AA cell with solder tabs, and it employs a selfdestruct device for the casing when the shaver is being thrown away a oneway coin turning device around the power jack; see manual. I was able to defeat this device and reassemble my shaver. I bought a NiMH cell with solder tabs from Thomas Distributing, but most solderable cells come with sheet metal tabs instead of wires, so I had to cut them down. [Click to expand](#). I dropped my brown shaver a few months ago and it immediately stopped to do anything. After a short unsuccessful attempt to open it, I gave up and used my old Gillette. Today, I finally decided to do a google search to find any information on how to open it before I have to buy new razor blades. And almost the first link it gives me is this thread and the link to the service manuals. Thats far more than I expected!!!

It appears to have some similarities to my 4501 it appears to use one NiMH AA cell with solder tabs, and it employs a selfdestruct device for the casing when the shaver is being thrown away a oneway coin turning device around the power jack; see manual. I was able to defeat this device and reassemble [Click to expand](#). My 6510 manual 5705 seems to have the same. I didnt expect anything that nasty in there. I would have probably turned the big coin screw as soon as I found it. I will try to stay clear of it. The batteries are still fine anyway. Now I only have to find the shaver again and I will try to see whats broken tonight. I hope, its just a cable which came off somewhere. Christoph I recall being able to bend them back to restore the selfdestruct assembly to be able to reassemble the case. I do not know if the case can even be opened without at least partially activating the selfdestruct device. And of course, 2 screws are hidden behind plugs. I recall being able to bend them back to restore the selfdestruct assembly to be able to reassemble the case. I do not know if the case can even be opened without at least partially activating the selfdestruct device. And of course, 2 screws are hidden behind plugs. [Click to expand](#). The two screws behind the plastic plugs work perfectly well. I just didnt find them the first time round. The case slight open easily when those two screws are opened. And the service manual was very helpful. It gives very detailed instructions on how to take it apart step by step and what to look out for when reasempling. The shaver is actually designed to be servicable, which I find quite impressive for a consumer product in this price range. In the end, it was actually something which I didnt expect. The motor has a little notch on the axle, which turns round and moves the knife part up and down. My shaver has a head which can swing and the axle pin they call it eccenter is in a groove.

When the shaver fell down, it must have jumped out and the motor wasnt able to turn any more. All the electronics was still fine. It took mine almost completely apart before I realised this was the cause, but it would have been enough to just take the head of and put it on again. They even mention this as a potential problem in the service manual. Anyway, its working now. Thanks again to G. Louie for the link, Christoph I presume the motor is simply a dc motor and that the faster speed is the

result of a higherrpm motor in that model. I had the idea to somehow speed up my shaver, but I see that this might not be practical. Ideas Thanks,It seems to work to a certain extend. It still has a separate longhair trimmer. I presume the motor is simply a dc motor and that the faster speed is the result of a higherrpm motor in that model. Click to expand. Click to expand. I hope this helps, ChristophI was looking forward to simply adding a battery or such to get the higher speed, but it looks to be engineered differently. Thanks,Click to expand. I have been unable to bring it up. DickI have been unable to bring it up. Click to expand. Thanks so much. DickYoull need to choose a username for the site, which only take a couple of moments here .
