We have won the trust and confidence of our global car manufacturer clients, and the brand value propositions of stable quality and supreme service. We assure our clients of the precise, quick, and stable driving experiences. Advanced Point Addressing NavTool's Advanced Pointing Addressing function improves the navigation guidance experience with enhanced arrival accuracy. It delivers a more rewarding pointtopoint routing experience by providing more accurate tothedoar arrival. In addition to the benefits are offered by NavTool's Advanced Pointing Addressing function, invehicle navigation system including visual content can provide more intuitive guidance and orientation that helps guide the driver to the exact point of their destination. Landmark Voice Direction You can listen to the navigation instructions while driving without distractions. It gives you the voiceguided directions in a more userfriendly experience to make a turn at the obvious landmark and drive safely on the correct road. It offers the most useful map data for GPS navigation, shows you the landmark directions, and warns you the next road name and landmark distance on the road. 3D Landmarks and Buildings 3D landmark and building models on the full view of the map make a comprehensive

survey of surrounding area. The intuitive visual guidance simplifies the process of navigating complex junctions and shows the appropriate lane you should take. The Junction View function makes map navigation easier to visualize, allows drivers to follow instructions easily. You won't miss your turn or make any dangerous lane changes. Road Signs As Real NavTool Sign As Real function provides realistic graphic representations of key road signs for specific guidance. The function enables improved guidance at complex decision points for the drivers by displaying a reconstructed image of the sign, emphasized destination sign text and fading out irrelevant sign information.

It supports the drivers to recognize real situations easily during maneuvers. The integration of the new visual objects with maps will offer a better navigation experience. It's easier to navigate you in the correct lane before the upcoming junction. It shows the Lane instruction on the road with the location of markers indicating the entrance, the lane, and the exit. There are the benefits from Lane Marking Guidance that can help drivers choose an appropriate lane position and have enough time to change lanes in advance. You can choose the setting of the warning distance, icon, and alarm. Once you enable speed alerts, which will warn you when you are driving over the speed limit. If you are over the speed limit, you'll read the red speed in the bottom right corner and will keep hearing "Drive Slowly" sound. This function could be enabled or disabled. To ensure your safety, it also provides speed camera alert. The speed cameras sign will show when there are speed cameras in front of the car. The speed camera alert will warn you when the speed camera is approaching along the road. You will hear "Speed Camera Ahead" sound when it is approaching; then you will hear one "Ding" sound when you deviate from the speed camera. The Language Menu allows you to change the Settings of NavTool for use in different countries. You can change the Text and Voice prompts used by NavTool. Based on the traffic events, the accident detour feature recognizes traffic jams and accident events on the highway. It immediately calculates detours and gives hints. Traffic flow function enables navigation systems to offer drivers more useful realtime traffic information. It is a detailed, accurate and up-to-date digital dataset consisting of road network, road categories, and routing information for drivers to manage your routing planning that helps cars and fleets smarter and navigation applications more robust.

imagespa.mx/wp-content/plugins/formcraft/file-upload/server/content/files/1626f66f369fe1---bosch-wte8430sgb-manual.pdf

NavTool clearly marks the direction on the road next to the affected lanes where a traffic event happened and offers an automatic list of the traffic events that impact on the itinerary. MultiStop Route Plan Manually and Automatically NavTool's MultiStop Route Plan function provides you the smartest itinerary management. It also supports two models of multistop route planning manually and automatically. If you have some places to visit on your itinerary, you can add several new navigation destinations on the journey easily. Besides, there are a variety of different routing settings, such as vehicle type, faster, shorter, avoid highways, avoid toll road, avoid minor roads, and avoid ferry. It can calculate the multistop route plan rapidly with the preferred options. Keyword Search Keyword Full Text Search allows you to simply enter the partial name of the point of interest or road, find related terms appear near the top of the list and finally get the search results of your destination easily. The sequence of the result list is sorted by the distance. The maximum searching distance is 2,000 miles and maximum lists the 300 POIs that were previously in sequential order for convenience should you decide to revisit the same place in the future. It provides nearby POIs' category searching methods to speed up destination searching, such as restaurant, shopping, travel, hotel, traffic, government, sports facility, service center, etc. Smart Input Smart Input can automatically gray out characters and speed up address entry. Diverse Destination Searching Methods NavTool provides diverse destination searching methods to speed up destination searching, including address, points of interest POI, keyword, my favorite, recent, current position, coordinate, category, and photo.

It not only provides recently search function that keeps the user searching history and easy to find it again, but also provides a nearby search function that enables the user to search around their locations destination. It immediately lists Search Results by the distance to the current location from near to far. Personal Navi Data Recording NavTool's My Favorite function allows you to store and list up to 50 destinations that were previously entered in sequential order and it's very convenient for you to revisit the same places in the future. It also offers My Itinerary function, a list of the userdefined intermediate waypoints and enables you to set on the way to your destination. NavTool keeps your Recent Search History automatically and makes it easy to find it again. The dealers want a lot of money for the newer discs. What, if any, alternatives would be available to update my nav. disc Update instructions are in your owners manual. They are living in the past as far as I'm concerned, and I have told them as much. The smart phone will be accurate and continually updated for free, will display a map with your location, and will SPEAK the directions and turns out loud, what more could you ask I'll lease one, but not buy one. Update instructions are in your owners manual. The smart phone will be accurate and continually updated for free, will display a map with your location, and will SPEAK the directions and turns out loud, what more could you ask I'll lease one, but not buy one. It always has. A Samsung Galaxy S2. Two that I can think of is when you are traveling in remote areas with little or no cell tower coverage, and having an inferior carrier. I also like being able to tell it where the destination is and it navigating to that spot. Just way too slow to be useful, especially on the fly. If factory nav can retrieve data directly from satellite, then it would undoubtedly excel in those remote areas.

If this is your primary use area, a dash mounted dedicated GPS device like a Garmin might be your cheapest solution. Two that I can think of is when you are traveling in remote areas with little or no cell tower coverage, and having an inferior carrier. Just way too slow to be useful, especially on the fly. If this is your primary use area, a dash mounted dedicated GPS device like a Garmin might be your cheapest solution. I got a Garmin Nuvi at that time and am still using it. It gives verbal directions anywhere in the U.S. and does not fritz out anywhere because all it needs is battery power and GPS satellite signals, and it doesn't have a speed or update problem. Garmin provides quarterly updates, and I use them at least twice a year. I had to pay for an unlimited update plan; new Garmins and other GPS units come with unlimited update plans. I have a friend that uses Google Maps in his Android phone in lieu of a GPS in his travels, and even with 4G the update isn't enough to keep up with road travel in complex areas at highway speeds, but it is still useful, and for my friend it combines his Palm Pilot, cell phone, and GPS, thus simplifying his active life. Verizon is the only truly unlimited data service; Google doesn't recommend using their maps for routine auto navigation unless you have an unlimited data plan. Google Information will provide many of the same benefits of OnStar Directions and Connections but without a person with a brain and OnStar training on the other end, and most people don't even know about it. OnStar does provide a selection of services that you can't get anywhere else because OnStar can read your OBD codes, alerts someone to call you back if you have an accident, and has a direct connection to GM Customer Service available in a heartbeat. And, they have extracost concierge services. If I were buying a new car now, I would go with BlueTooth, OnStar, and my own Garmin. A Samsung Galaxy S2. In my opinion. It sucks, compared to the factory NAV.

Maybe I just took it wrong since I made the suggestion to use a phone app. It is also very possible that OnStar services work better in some areas than others, for my area, they're not so good. I usually pull over or let my wife handle that part of the navigation duties. I use the Bluetooth feature in the Volt as well, but purchased a few cellular minutes from OnStar to be generous and to verify any coverage advantages. Both of them using Verizon, and there is no difference in voice coverage. I was hoping that the car phone would use satellite, or have more power, or something but that appears not to be the case. The Emergency button MAY work a little better in remote areas, but I have yet to verify that. My one attempt to connect via the emergency button from my rifle range on

the advice of Onstar customer service failed miserably. Except scratch the words iPad, Iphone or Ianything, any current phone will connect to your car using bluetooth or USB. UNfortunately, the advanced features available on the new phones ARE NOT supported by the cars, just voice calling. Probably an attempt to make factory nav still applicable, which it is not in my opinion. So for me its Bluetooth, OnStar, and my own smartphone. Paste as plain text instead Display as a link instead Clear editor Upload or insert images from URL. If you continue, you will be logged out. Your cart will only be available after logging in again. Use the contact form, live chat, or call one of the following number 18883517608 Representatives are available Monday through Friday, 900 am to 700pm EST. The 10th digit will be a letter or a number. Find the corresponding letter or number in the table below to determine the model year of your vehicle. If not, the manual should indicate where you can locate the VIN. The VIN is often found on the driver's side dashboard just beneath the windshield. The VIN is also commonly listed on the vehicle title, registration card, and insurance documents.

Exact data may vary by product. Each map update keeps your system operating at peak performance with essential data including new and modified roads, addresses, signage, points of interest, and much more. Contact Us These uptodate points of interest are important to your everyday driving needs. From finding the nearest ATM when traveling around town, to locating a nearby fuel station on your next road trip, an optimized navigation system will help you drive with confidence and ease. Unlike portable devices with small screens and even smaller buttons, your invehicle navigation system can help you remain focused on the road ahead. Updating your map maximizes your drivercentric navigation experience, helping you get the most from your system. Each product page details the map coverage area, highlights new road data, and provides clear installation instructions. Additional support is available via the Help Center. All major credit cards and PayPal are accepted. Each map update is customized to the navigation system in your vehicle. Shop with confidence knowing that you are getting an authentic product offered via a secure payment platform. Stay on time and on course—update your GM navigation system map today. Exact data may vary by product. GPS mapping may not be detailed in all areas or reflect current road regulations. The services provided to you on this site i.e., your purchase of a product and related fulfillment services are not provided by your auto manufacturer, but rather by HERE North America, LLC, 425 West Randolph Street, Chicago, Illinois, 60606, USA, an independent company.
