Mia Mack 5.0 out of 5 stars Today, November 11th, the switch went bad and now it does not work. I need to know what will Amazon or Soncoo do about this. I really like this machine, but for this amount of money, a switch should not go bad in 4 months.

My answer is yes, if you're looking for a machine to do some casual designs for a large event or two in your life; however if it's for a business I wouldn't be qualified to say either way as I have no experience with these machines. I'm impressed! I'm making shirts, caps, haven't tried the cup or plates but sure it will be fine. It's easy to use and you have everything you'll need. Very easy to use. Everything works and is doing what it's supposed to do. Tips over easily so you need to be careful when swiveling the arm. Our payment security system encrypts your information during transmission. We don't share your credit card details with third-party sellers, and we don't sell your information to others. If this is a gift, consider shipping to a different address. Please try again. INSTRUCTION VIDEO BELOW: Digital control box can be set to temperature as requested. Notes: Please kindly try a sample to test the right temperature and time before printing a large quantity to avoid vinyl sticking issues. Detachable lower platform, easily exchangeable to other elements. Removable silicone pad and cotton pad. Temperature range 0482-0250, Time range 0999 seconds. Notes: Before starting the heat press, it needs to be adjusted to the level height to test the pressure; if the level cannot go up or down, please kindly tighten the little screw on the arm. Note: T-shirts, cups, and hats are NOT included. If you have any problem, please feel free to contact us. Once I had the funds to purchase, I decided on this press for a few reasons

1. No peeling issues and come with larger surface area
2. Super simple to program if you take a minute to read the basic instructions.
3. Comes with right temperature and pressure. I have a digital temperature reader and the surface is fairly consistent in temperature. The further out to the edge you get, the temperature does drop off a bit, but nothing that affects the vinyl adhering to the material.
4. Completed attachments and clear video instruction. I have made several crafts until now and result is amazing. I was pleasantly surprised to find that the parts change out easily. Ive made a hat and multiple shirts with zero issues. I definitely recommend this, especially if you are a firsttimer like me looking to inexpensively start a tshirt business with a quality heat press. It has a special coating that protects my clothing and other products while we work on them, the pressing pad for hats or mugs is anti slip, that is a great feature specially for coffee mugs. We are very excited with the fact that it comes with all the necessary accessories to do stamp our t shirts, mugs, hats, pet clothing and more!!! Please let me know if our video was helpful for you! Cheers!!! I used it to make custom shirts, result is amazing and over my expectation. This machine is easy to set up and use. For first use, it may some stuck on the handle arm. It need to pull up and down several times. If not, lubricated with some grease on the arm, it will be more smooth. This mahcine heats up quickly and reach to 320F, only needs about one minutes.

I reading ton of reviews good and bad before purchasing this one, a lot of people complain that the heat press can not heat properly, even can not over 150F. I have a laser temperature gun to check my press, preset two tempertures 320F and 360F, it can reach the temperture accurately and control it well through led control box. This press also can rotate 360 degree, when you put tee shirts on platform, you can swing away the heating plate to avoid burning. Overall, it is a great investment and so pleased with this purchase!Its great for my little hobby room, and I didnt have to spend an arm and a leg for a heat press that will makes all the hats and shirts and mugs that are necessary to keep my home and family and friends happy. It heats very quickly, I have no issues with my projects heating evenly and staying put. Set up was a breeze, and the instructions were simple and easy to understand. Granted they were evidently created in the county of origin, but I had no problem understanding how to use the different options for pressing. I feel like I got a good machine for an excellent price, and the vendor has been wonderful with keeping in touch, making sure Im satisfied, and checking on any questions Ive had. Ive had it out of the box for only a week, but I couldnt ask for it to be any better for me than it has been.My only other experience with a heat machine is the cricut easy press 2 that I also own. I havent touched my easy press in the 3 months I have owned this press.Ive used it to personalize shirts, havent yet tried the other features, but it is relatively easy to use. Machine comes with instructions, that are easy to follow. If you are personalizing different products, its best to finish shirts, then caps, then plates, etc.Ive basically just received the item, so, at least so far it hasnt gave me troubles. Would update, if necessary.Great for beginners. It definitely works great. The heat seems to distribute evenly, it gets to temperature with no issues.

Everything seems pretty spot on and its awesome that it came with the other attachments. The only downsides I have are that one of the bolts to change the attachments were already stripped when I received it, so unfortunately after a little while Im probably not going to be able to use them. The bolt that also keeps the top plate on loosens ALL THE TIME. I swear Im retightening it daily, if not more than once a day. The bolt is big, but the space between the other bolts is too small to fit a wrench in to, so Im also screwing it in all the time by hand. My only downside to it!I am printing shirts, towels and so much more. I did have some difficulty with the cup press and I must say I am extraordinarily happy with the customer service. I could not find warranty information in my packaging so I emailed amazon who put me in contact with the manufacturer. They were courteous, prompt and immediately offered a replacement of the cup press and heating source. I received the replacement in a couple weeks. It's so nice when companies stand by their products. I have also recommended this same unit to friends and all have loved the ease of use.
